Coursera Capstone project for battles of Neighborhood

Introduction

If someone ask where to open a restaurant which is profitable. This project can give an idea of location and how it can be profitable.The stakeholder wants to where he can open restaurants so that he can get maximum profit. The Data source is kaggle.com where Zomato's data is collected in CSV format. The CSV data contain about restaurants name, location, cuisine, user rating, parking lot, food etc. Transportation is also a factor or it is nearby any education area.

Business Problem

The stakeholder ask me the location where he can open restaurant. Absolutely he will invest a lot of money, so he wants to make sure that the restaurant should profitable and within a period he can recover expenditure. So I search some site to get the data about restaurant in different area including user rating. The kaggle.com has many source of csv data. I have downloaded the Zomato's data and I am going to analysis it so I can suggest him the correct location with food services.
